PROFESSIONAL SUMMARY

Software Engineer with specialized experience in the Angular ecosystem, focusing on scalable component architectures and complex form structures (**Dynamic Reactive Forms, FormArray**) within enterprise-level projects containing 10+ modules. Expert in architecting **backend-driven dynamic UI** engines that facilitate runtime data-driven interface management. Proven track record in ensuring high-performance data synchronization through **RxJS** and service-based state management. Highly skilled in developing innovative hybrid interface solutions by integrating modular components created with **Unity UI Toolkit (UXML/USS)** via **WebGL**.

TECHNICAL SKILLS

Languages & Frameworks: Angular, TypeScript, JavaScript (ES6+), RxJS, C#, RESTful API

UI/UX & Graphics: Unity UI Toolkit (UXML, USS, VisualElement), Dynamic Reactive Forms, FormArray, Custom UI Components, Responsive & 4K Optimization, SCSS/CSS3, HTML5

Tools & Methodologies: Git, WebGL Integration (JS Bridge), State Management (Service-based/Observable), Singleton Pattern, Agile/Scrum, Jira, Clean Code Principles

WORK EXPERIENCE

Birtech Technology | Software Development Specialist

09/2024- Present

- Played a key role in the frontend development of an enterprise-scale **DCIM (Data Center Infrastructure Management)** application, including sensor monitoring, asset management, and operational dashboard modules.
- Designed and implemented a **scalable and sustainable frontend architecture** using component-based and modular structures within the Angular framework.
- Engineered flexible data entry systems to manage complex business processes and configurations using **Dynamic Reactive Forms** and **FormArray**.
- Developed a **backend-driven UI** approach, enabling single-line diagrams and dashboard structures to dynamically adapt based on runtime data.
- Ensured seamless **real-time data flow** and synchronization between system components by utilizing **RxJS** and service-based state management.
- Performed refactoring and performance optimizations on existing frontend modules, significantly improving the responsiveness of **high-density data dashboards**.
- Developed innovative **hybrid interface solutions** by integrating real-time visualization components (Single Line Diagram, Super Sensor, 2D Monitoring) created with **Unity UI Toolkit (UXML/USS)** into Angular via **WebGL**.

- Developed an end-to-end CV management application built on **.NET Web API** and **PostgreSQL** architecture, utilizing **React** for the frontend.
- Managed database design and **RESTful API** integration processes, taking an active role in the entire **full-stack** development lifecycle.

PROJECTS

TCDD Trip Tracking & Notification Bot (Personal Solution Project)

- Developed an automated system to solve ticket availability issues for personal travels, performing real-time trip and seat tracking with instant notifications sent via **Telegram** when a seat becomes available.
- Architected web automation workflows using **Node.js** and **Playwright**; transitioned to direct **API integration** in the second phase to optimize system performance and reliability.
- Utilized **MongoDB** for data management to store user preferences (route, date, seat type) and ensured uninterrupted system operation through asynchronous processing.
- Deployed the application on the **Render** platform, gaining hands-on experience in **cloud deployment**, environment variable (env) management, and maintaining continuous uptime.

EDUCATION

Konya Technical University | B.S. in Computer Engineering

2020 - 2024

GPA: 3.59 / 4.00

- Gained theoretical and practical proficiency in core computer engineering principles, including **Data Structures**, **Object-Oriented Programming (OOP)**, and **Software Design Patterns**.
- Focused on **Database Management Systems** and **SQL**, gaining hands-on experience in relational data modeling and query optimization.
- Developed a strong discipline for analyzing complex problems, architecting algorithmic solutions, and building sustainable software through a rigorous engineering approach.
